Michael Boneta

Binghamton, NY | (631) 747-7911 | mboneta@binghamton.edu | linkedin.com/in/michael-boneta | michaelboneta.com | github.com/Boneta123

EDUCATION

Binghamton University, SUNY — Watson College of Engineering & Applied Science Expected May 2028
B.S. in Computer Science

Connetquot High School — High School Diploma June 2025
Cumulative GPA: 100.98/100

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, SQL, PowerShell, MIPS 32-bit Assembly, HTML, CSS
Frameworks / Libraries: Spring Boot, React, Node, Express.js, Next.js, FastAPI, Thymeleaf, Prisma, pandas
Databases & Tools: MySQL, PostgreSQL, Supabase, AWS S3, Docker, Git/GitHub, Postman, OpenAI API, IntelliJ IDEA, VS Code

WORK EXPERIENCE

Professional Group Plans — Information Technology & Operations Intern Jun 2026 – Aug 2026
- Architected a Flask application leveraging Vertafore's API to integrate Excel data directly into BenefitPoint, eliminating manual data entry across account-update workflows.
- Automated data migration and validation with pandas to process Excel files into automated workflows, reducing manual reconciliation time.
- Safeguarded sensitive PII and insurance documentation as a general agent, ensuring compliance with data-privacy standards.

LI Script — Information Technology Intern Jun 2026 – Aug 2026
- Scripted Active Directory commands in PowerShell to enable self-service password resets, cutting administrative overhead.
- Built a Python solution integrating openpyxl, Microsoft Graph, and PowerShell to sync staff records from Excel into Microsoft 365, plus an email-driven automation that parses inbound requests to add personnel to distribution lists.

PROJECT EXPERIENCE

Calendericious — Mobile Native Application, Team Leader Jun 2026 – Sep 2026
- Built a full-stack mobile app (React Native/Expo + TypeScript) on an Express REST API, Prisma 7, and Supabase Postgres, delivering a crowdsourced calendar of time-specific restaurant deals across 175+ national chains.
- Designed a location-aware "Near me" feature using device GPS and LocationIQ geocoding with client-side haversine filtering and OpenStreetMap/Overpass address verification.
- Implemented secure auth and an admin dashboard: token-based sessions, scrypt password hashing, email-based reset, and rate limiting with a fail-closed admin console.

Brawl Selector Help — Team Leader Apr 2026 – Jun 2026
- Engineered a full-stack Spring Boot app integrating the Brawl Stars API, ingesting 200+ calls every 20 minutes to aggregate real-time brawler pick-rate data across maps.
- Built the end-to-end data pipeline and server-side dashboards with Thymeleaf and Chart.js, transforming raw JSON into interactive visualizations of usage trends.

Siteline — Full Stack Developer @ HackHarvard 2026, Healthcare Track Winner Oct 2026
- Built a full-stack AI tool (React, FastAPI, OpenAI) that triages clinical trial contract redlines against a rules-based playbook, cutting unsafe approvals from 2.6% to 0% across 243 labeled clauses.
- Set up Supabase Postgres and S3 storage and built the frontend, plus an agent that searches signed agreements to inform each new negotiation.

LEADERSHIP & INVOLVEMENT

ColorStack BU — Member Sep 2025 – Present
- Participate in professional-development workshops (code development, hackathons, networking) and build connections with peers, mentors, and industry professionals promoting computer science.

StackHacks — Binghamton University Project Team Sep 2026 – Present
- Collaborating with a cross-functional team to plan and build a full-stack software engineering project over a semester-long development cycle, contributing to system design, feature development, and code review.
